## Store-II Storage shelving.

System comprising full and attachment shelf units and individual shelves.

Construction of connected steel T-hollow profile sections with shelf inserts. Upright profile sections with grid holes for individual positioning of shelves. All full shelf units and all attachment shelf units are braced as standard with two and one diagonal connector(s) respectively on the back of the shelving. All steel parts are galvanised or galvanised and powder-coated.

Equipment with shelves of edged sheet steel.

The following material groups are available: Frame and bases made of metal: M(light grey RAL 7035, galvanised).

	Rows of holes: 1" Load per shelf: 330,7 lb
